

SmartMiles

→ Changing consumer behavior, increasing opportunities and advances in technology are shaping the future of the logistics business.

As the industry evolves and new business models emerge, there is an increasing focus on enhancing customer satisfaction and increasing operational efficiency. Logistics companies need to balance the drive to win market share with the imperative to increase profits.

At Avon Mobility, we understand this and have developed SmartMiles, an enterprise logistics solution, which automates logistics (first mile and last mile) operations through mobile and web applications. The solution's proof of delivery (POD) feature seamlessly captures signatures and photographs which can be used as a delivery proof. SmartMiles also offers advanced route planning capabilities which can be used to streamline the delivery process, enhancing efficiency and predictability, while providing the real-time visibility vital for today's customer centric business models.

AUTOMATE OPERATIONS, REDUCE COST

SmartMiles helps logistics companies digitize their operations and implement completely paperless and automated processes across the first and last mile operations. Changes such as elimination of delivery sheet and POD data entry not only help in optimizing resources but also enhance the speed of operations. SmartMiles allows users to automate processes such as data capture, the calculation of weight and freight, package wise label printing and receipt printing.

ABOUT NUCLEUS SOFTWARE

Nucleus Software is the leading provider of mission critical lending and transaction banking products to the global financial services industry. With three decades of expertise and experience, today, it powers the operations of more than 150 companies in 50 countries, supporting retail banking, corporate banking, cash management, internet banking, automotive finance and other business areas

AVON MOBILITY

Avon Mobility, a part of Nucleus Software, provides mobility Solutions for the banking and logistics industry with a proven track record in implementing large sized enterprise mobility solutions. Our core strength comes from the in-depth understanding of domain and efficient use of mobility technologies in designing Products that are smart, easy to implement and cost effective. Our solutions across the value chain cover :

 Real-time data driven business Analytics

 Automation of field-based business processes

 Field operations visibility, command & control

 Route Planning and Optimization

The following are the enterprise solutions offered:

 SmartMiles

 SmartGeo

 SmartCollect

 SmartRoute

It also provides the flexibility to choose the most appropriate channel for the delivery and scale up as per need. The solution caters for exceptional delivery situations such as damages, short or excess order and statutory inputs such as GST and E-way bill details. SmartMiles also provides weight and freight calculation features with imaging functionality.

ENHANCE VISIBILITY, BOOST PRODUCTIVITY

By automating operations with SmartMiles, logistics companies can eliminate human errors, increase predictability throughout the operational value chain and boost productivity. SmartMiles route optimization functionality helps the team find out the best route to be taken for a faster and time bound delivery. With real time location and activity updates, companies have the flexibility to change strategy on the go.

DEPLOY FASTER, INTEGRATE SEAMLESSLY

SmartMiles is provided as software as a service offering which eliminates the requirement for upfront license costs. The solution can be seamlessly integrated in existing technology ecosystems including ERP systems, which makes it easier and faster to deploy.

DRIVE GROWTH, INCREASE CUSTOMER SATISFACTION

The unique capabilities of SmartMiles such as Shipment tracking, Instant Proof of Delivery (POD) with exact time, location and imaging capturing and providing real time notifications to the customers help logistics companies increase customer satisfaction. By optimizing processes in operations the solutions helps companies make faster and on-time deliveries, thereby resulting in more pickups and deliveries per person.

This improves overall cost efficiency and unlocks additional capacity, which in turn helps drive business growth.

FEATURES**PICK UP AUTOMATION:**

- Reconciliation
- Dynamic pick-up
- Piece level printing

DELIVERY AUTOMATION:

- Imaging functionality
- Real-time visibility
- Scheduling
- Route Optimization
- Notification services
- Comprehensive POD/COD
